The Japanese priority applications were not provided by the International Bureau.

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-5, drawn to a composition of low iron and phenol content, classified in class 524, subclass 317.
- II. Claims 6-10, drawn to a PC composition of low hydroxyl endgroups and a low content of certain compounds, classified in class 524, subclass 317.
- III. Claims 11-15, drawn to a PC composition of low iron content and certain NMR signal, classified in class 524, subclass 317.
- IV. Claims 16-20, drawn to a PC composition of low iron content and low hydroxyl endgroups, classified in class 524, subclass 317.

Unity of invention practice is applicable to applications filed under 35 USC 371 (MPEP 1893.03(d)). The common requirement among all four groups is a PC of MW 10,000-17,000 and 100-500 ppm of release agent. Note that Group 2 lacks the iron content requirement that the others do. This common requirement does not avoid the prior art (see J08073724's teaching of PC + release agent). Therefore, there is no "special technical feature". Also see Annex B of the PCT Administrative instructions.

A telephone call was made to Stefan Koschmieder on 3/17/03 to request an oral election to the above restriction requirement, but did not result in an election being made.
